This is us
I used pictures cause people tend to forget names, most people know victor as the Russian so I said keep it simple

Both myself and victor both have multiple years of security related stuff form both sides of the table and we are both
Members of the Irish national Cyber Security Team.

If you Have Questions Feel Free to ask them or even approach us after or if your not comfortable our emails are there.

We All I am assuming know the difference between a white and a black hat hacker There are many more "Hats" but il just use these to for simplicity

For those who don't, a black hat is the bad guy or the attacker and the White hat is the good guy the defender

ETHICS

For hacking to be deemed ethical, the hacker must obey the following rules:

1. Expressed (often written) permission to probe the network and attempt to identify potential security risks.
2. Keep private and confidential information gained in your work. Not collect, give, sell, or transfer any personal information (such as name, e-mail address, Social Security number, or other unique identifier) to a third party without client prior consent
3. You close out your work, not leaving anything open for you or someone else to exploit at a later time.
4. You let the developer or hardware manufacturer know of any security vulnerabilities you locate in their software or hardware, if not already known by the company
5. Neither associate with malicious hackers nor engage in any malicious activities
6. Not to take part in any black hat activity or be associated with any black hat community that serves to endanger networks
7. Not to be part of any underground hacking community for purposes of preaching and expanding black hat activities
8. Never knowingly use software or process that is obtained or retained either illegally or unethically

fppt.com

If these are not followed you can lose Certifications and Licenses, these are only the top points of Ethics for more See the EC-Councils Code-Of-Ethics

The College enforces the rules heavily, they will contact the guards and you will face exspulition from the college
The Network is heavily monitored

This year we Need to bring in this talk after a Incident last year involving a member

If you are "Caught" hacking on Campus or even off Campus you will face a Life Time Ban from the Hacker Soc, We are a small community
In Cyber Security from the college our past students work everywhere and can easily find out how you screwed up which could effect your
Careers Its Easier not to do anything

We are all members of the Soc, don't do anything to make the soc look bad such as Hacking soc event locations, or get overly rowdy
For example this Friday at Weatherspoon's, you can have a laugh but don't get Rowdy or do anything to make the soc look bad
We Like spoons and at current they like us lets keep it that way.

Anything you Do, you do of your own acord, Meaning the soc will not take responsibly for anything you do with information you learn

And if you don't follow the rules you are a *Click*
